SUMMARY

Full-stack software engineer with 5+ years building high-volume financial systems and AI-powered applications in production. Specialized in Java, Python, and TypeScript backends, React frontends, Kafka event-driven architecture, and agentic AI integration using Claude API and LangGraph. Track record of delivering measurable outcomes: 40% latency reduction, 60% throughput improvement, and 80% reduction in manual workflows across regulated fintech environments.

PROFESSIONAL EXPERIENCE

Software Engineer, Full Stack, JPMorgan Chase | Dallas, TX **Aug 2024 - Present**

- Architected fault-tolerant, highly available microservices platform using Java, Spring Boot, and AWS, processing 50,000+ daily reconciliation transactions at 99.8% uptime across distributed cloud infrastructure.
- Developed LLM-powered agentic workflows using Claude API, LangGraph orchestration, and MCP server integrations, reducing manual document processing cycles by 40% across compliance operations.
- Accelerated feature delivery by 35% by integrating Claude Code and GitHub Copilot as primary development tools, while maintaining enterprise code quality and regulatory compliance standards.
- Engineered 15+ RESTful and GraphQL API endpoints with OAuth 2.0 authentication and role-based authorization, reducing production incidents by 35% quarter-over-quarter.
- Delivered React and TypeScript real-time dashboards using WebSocket data streams and reusable component libraries, reducing manual data extraction requests by 80% across 300+ daily users.
- Led migration from legacy monolithic reporting to event-driven Kafka microservices architecture, improving platform throughput by 60% and decoupling 6 downstream settlement services.
- Reduced API latency by 40% under sustained concurrent load by optimizing PostgreSQL schemas with composite indexing and execution plan analysis.
- Containerized 8 microservices using Docker and Kubernetes on AWS (ECS, Lambda, CloudFormation), deploying with CloudWatch observability instrumentation for production monitoring.
- Established automated CI/CD pipelines using GitHub Actions and Jenkins, cutting deployment time from 2 hours to 15 minutes across Dev, Staging, and Production environments.
- Raised automated test coverage from 45% to 78% by implementing TDD practices using JUnit, Pytest, and Jest, catching 12 critical defects before production deployment.
- Mentored 2 junior engineers on Spring Boot patterns, distributed systems design, and agentic AI integration, improving team velocity through Scrum-based knowledge-sharing sessions and cross-functional collaboration.

Full Stack Developer, Graduate Assistant, Texas Tech University | Lubbock, TX **Sep 2023 - Jul 2024**

- Developed and maintained internal IT web tools using JavaScript, PHP, HTML5, CSS3, and SQL Server, streamlining support ticket management and resource allocation for 20+ staff.
- Engineered reusable UI components and backend modules adopted across 5+ internal applications, reducing development time by 15-20% and ensuring UI/UX consistency university-wide.
- Refactored 15+ complex SQL Server queries with proper indexing and execution plan analysis, achieving 35% performance improvement and reducing database CPU utilization by 20%.
- Streamlined data aggregation and validation workflows, improving report accuracy from 87% to 99% and eliminating 22 hours of combined weekly manual effort.
- Collaborated with IT management and end-users to gather requirements, prioritize features, and deliver iterative improvements through weekly Agile sprint cycles.

Software Engineer, Citi Bank **Jan 2021 - Jul 2023**

- Engineered Java and Spring Boot transaction APIs with OAuth 2.0 authentication, role-based authorization, and audit logging, supporting compliance-sensitive retail banking workflows for 100,000+ daily transactions.
- Built React and TypeScript frontend components for transaction history, account balance tracking, and fund transfer workflows, integrating with backend APIs via Axios with comprehensive error handling.
- Reduced batch reconciliation pipeline execution time from 8 minutes to 90 seconds by restructuring SQL queries, adding indexed views, and optimizing execution plans across 100,000+ daily transactions.
- Established JUnit test suite with 70% code coverage through test-driven development, identifying 5 critical security and logic vulnerabilities before production deployment.
- Collaborated with cross-functional teams across product, QA, and operations to deliver scalable banking platform features through bi-weekly Agile sprint cycles.

PROJECTS

E-Commerce Platform (Full Stack)

- Built full-stack application with Node.js, TypeScript, React, and PostgreSQL supporting 20+ REST and GraphQL endpoints with JWT authentication and Redis caching, cutting database queries by 60%.
- Configured CI/CD pipeline using GitHub Actions and Docker across Dev, Staging, and Production environments on AWS.

Real-Time Collaborative Platform

- Created a real-time collaborative platform with React, TypeScript, Node.js, PostgreSQL, and Socket.io for sub-second content synchronization.
- Configured transactional database operations with row-level locking and implemented rate limiting and input sanitization, reducing client exceptions by 70%.
- Optimized React performance with React.memo and useMemo hooks, cutting unnecessary component updates by 80%.
- Implemented API logging with request correlation IDs for quick diagnosis of production issues.

VCF2TXT Genomic Data Processing Platform

- Architected scalable backend using Python and FastAPI to process large genomic VCF files (500MB+) with asynchronous task processing via Celery and Redis supporting parallel execution and automatic retry logic.
- Enforced strict schema validation using Pydantic models preventing 95% of processing errors and designed idempotent workflows with checkpointing for safe handling of partial failures.
- Shipped React and TypeScript dashboard visualizing real-time job status and processing metrics with automatic polling.
- Containerized application using Docker with multi-stage builds, reducing image size by 60%.

SKILLS

Languages : Java, Python, TypeScript, JavaScript(ES6+), PHP, SQL

Frontend : React, Next.js, Tailwind CSS, HTML5, CSS3, Vite, Webpack, Component Libraries, WebSockets

Backend : Spring Boot, FastAPI, Node.js, Django, RESTful APIs, GraphQL, Microservices, Kafka, OAuth 2.0, JWT, Celery, Hibernate/JPA

Databases : PostgreSQL, MySQL, SQL Server, Redis, MongoDB, Schema Design, Query Optimization, Indexing

Cloud and DevOps : AWS (EC2, ECS, Lambda, S3, SQS, CloudWatch), Docker, Kubernetes, GitHub Actions, Jenkins, CI/CD, Terraform

AI Development : Claude API (Anthropic), OpenAI API, LangGraph, RAG Pipelines, MCP Server Development, Claude Code, GitHub Copilot, Agentic Workflow Automation

EDUCATION

Texas Tech University - *Master of Science, Computer Science* **May 2025**

JNTUH - *Bachelor of Science, Computer Science* **May 2023**

CERTIFICATIONS

AWS Certified Cloud Practitioner, AWS

Meta Backend Development, Meta

Microsoft Full Stack Development, Microsoft

UX Design Fundamentals, Microsoft
